# One Example of a Co-design resource

#### Education

- 1 Neami will offer staff and consumers opportunities to increase their medication knowledge through partnerships with psychiatric, general practice and pharmacy professionals to promote choice and selfmanagement.
- Neam's 1stff will support consumers to identify medication side effects and encourage them to discuss these with clinicians and develop an action plan for their mitigation.
- 3 Neami Staff will support consumers to understand the ways in which health behaviours (e.g. smoking caffeine use, exercise) can influence the wanted or unwanted effects of medication.
- 4 Neami Staff will support consumers to understand the risks of withdrawing abruptly from medication.

  Neami Staff will support consumers to access accurate information about their rights and responsibilities as
- Neam: Staff will support consumers to access accurate information about their rights and responsibilities is users of mental health services.

Improving Mental Health and Wellbeing

Neami

#### Guideline: Supporting Conversations about Medication and Treatment

#### Scope

This guideline applies to all non-clinical staff who work with consumers and who may have conversations about medication choices and treatment options.

#### Purpose

This document aims to provide non-clinical staff with information about how to have conversations with consumers about medication and/or treatment and linking consumers to people who are best placed to provide guidance and support.

#### Rationale

Neami is primarily a non-clinical service provider and staff are not expected to exercise clinical judgement in relation to medication. However consumers have told us that experiences related to medication often have significant impacts on their daily lives, and they value the opportunity to talk about these with Neami staff. This document is intended to help non-clinical staff support consumers with managing medications, but also to know when it is appropriate to refer them back to their GP or other clinical supports.

The aim of health and wellbeing conversations with consumers is to increase consumer independence and autonomy in caring for their own health. Where a consumer has concerns or just wants to know more about the medication they are taking, they should be encouraged to talk with their Clinical Mental Health Team, General Practitioner, Psychiatrist or Pharmacist. Some questions that consumers could ask include:

- What is the name of the medication they have been prescribed?
- What are the benefits of taking the medication?
- What are the likely or significant adverse effects of taking the medication?
- Will the medication affect their energy levels, appetite, sleep or libido?
- What to do if they are experiencing adverse effects
- What should they avoid doing when taking the medication e.g. affect if taken with alcohol
- How to use the medication
- What to do if they miss a dose
- What to do if they are considering stopping or cutting down their medication
- Will further courses of the medication be needed after the first prescription?
- How to get further supplies of medication

Conversations about medication in practice do not require expertise in medication but a high level of enquiry, taking a no-blame approach and encouraging consumers to discuss any information needs or any doubts or

some of us felt taking the medication was helpful for our mental health & that we had a good relationship with doctors.

Other people were unhappy their opinions were dismissed, or had little choice around what medication they took.

#### Consumer feedback

"It [the Health Prompt] did prompt me to think about my GP. They wanted to keep me on the same sort of medication that I was on for 10 years. They weren't hearing me and they were discounting it. But now I've got a regular GP that has been the best GP I've had in all my life."

- consumer

"I find everyday that I'm making choices and decisions about my health, so I'm not just going to the cupboard and thinking there's some lolly. I'm thinking 'I can have some fruit'. Every choice that I make I try to make a positive health choice."

- consumer

#### Health Prompt Questionnaire

#### INTRODUCTION (Please read to consumers)

Thank you for agreeing to take part in this brief prompt about your health. I am going to ask you some questo help establish whether your health needs are being met and identify areas you may like support with. Whose we are interested in knowing about your health, please be assured that this information will be treated as street confidential.

Consumer Name:	Service Site:	
Gender/Sex:	Age:	
Date Completed:	Review Date:	

Que	estions	Yes	No	N/A
1.	Do you have a regular GP?			
2.	Are you satisfied with the relationship you have with your GP?			
3.	Have you had your blood pressure checked in the last 6 months?			
4.	Have you had your cholesterol checked in the last year?			
5.	Have you had your blood sugar levels checked in the last 3 years?			
6.	Do you do 30 minutes of moderate exercise 5 days per week?			
7.	Do you have at least 2 alcohol free days per week?			
8.	Do you eat 2 serves of fruit per day? Example of 1 serve of Fruit: 1 medium apple/banana or a handful of grapes			
9.	Do you eat 5 or more servings of vegetables per day? Example of 1 serve of veg: % cup of cooked veg or 1 cup of salad			
10.	Do you feel you drink enough water? 2L or 8 glasses is the average recommendation			
11.	Is your waist measurement below 88cm (women) or 102cm (men)?			
12.	Have you checked your skin for changes in the last 3 months?			
13.	Have you had your eyes checked in the past 2 years?			
14.	Can you hear and understand things easily?			
15.	Are you a non-smoker?			
16.	Have you had a dental check-up in the last 6 months?			
17.	Are you able to keep your balance and have not fallen recently?			
18.	Are your feet free from sores, blisters and swelling?			
19.	Are you satisfied with the quality of your sleep?			
20.	Do you feel you have enough information about the medications you are currently taking?			
21.	When feeling stressed or emotionally unwell, do you have someone you can contact?			
22.	Do you feel that you have healthy bladder and bowel function?			
23.	If over 50, have you spoken to your doctor about bowel cancer?			
24.	Do you have anyone to contact regarding your sexual health?			
25.	Is your pap smear/cervical screening test up to date?			
26.	Have you had your breasts checked by a doctor in the last year?			
27.	If over 50, have you had a mammogram in the last 2 years?			
28.	If over 50, have you discussed prostate cancer screening with your doctor in the last year?			

If you answered <u>no</u> to any of these questions, it is important for you to follow up with your G.P. and talk to your support worker regarding any support you may require.

#### **Health Prompt**

Are you a non-smoker?

Have you had your blood sugars check by a doctor in the past 2 years?

Are your feet free from sore, blisters or swelling?

Do you have a regular GP? Are you satisfied with your GP?

VERSION 1

#### Smile for Health 🖀

83 referrals

35 consumers treated

10 received free dentures

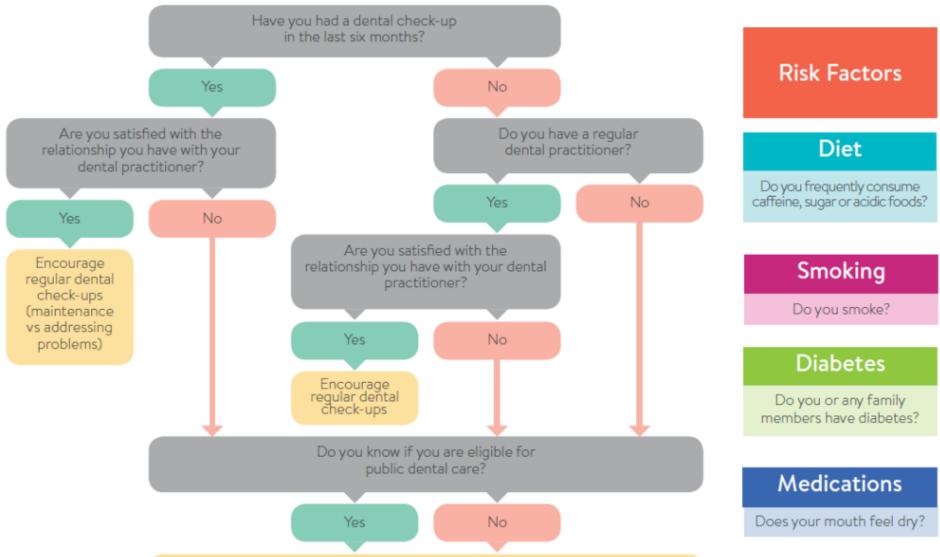

'Sorry there is a waiting list of up to 12months+ for a dental appointment', no priority for people with SMI.

-Public Dental Clinic comment

# 'I'm in a lot of pain, and cant eat much with my ill fitted dentures'

#### Oral health support flow chart

People living with mental illness are at an increased risk of oral health issues and face significant challenges in accessing appropriate oral health care.

Encourage regular dental check-ups and offer support in accessing oral health services

#### Oral health preventative information - key messages

 Brush teeth twice a day with a small-headed, soft-bristled toothbrush

#### Key oral health messages

- Use a fluoride toothpaste
- Clean in between teeth daily with floss or inter-dental brushes
- Limit sugary foods and drinks in between meals
- · Drink plenty of tap water

 Visit a dental or oral health professional every six months

#### Diet

People living with mental illness have significantly more decayed and missing teeth

Discuss preventive treatment with dental professional

- Mouth bacteria breakdown sugars from the diet and produce acid which dissolves the tooth structure (enamel and dentine) and can lead to cavities (holes) forming
- Tooth decay is the major cause of toothache, and can result in pain, infection and tooth loss
- Frequent consumption of sugars (especially in sweet sticky foods) will increase the risk of tooth decay
- Acidic foods and drinks will soften and erode the tooth structure

#### Limiting dietary effects on oral health

- Limit the frequency of consuming sugary foods (e.g., cakes, biscuits & chocolate) and avoid sticky Iollies and sweets, which will cling to the tooth surface for longer
- Limit the frequency of consuming acidic food and drinks (e.g. citrus fruits, soft-drinks)
- Use sugar substitutes when possible
- Have sweet treats occasionally, but have them at meal times and avoid sweet snacks or drinks in between meals
- Drink plenty of tap water
- Chew mint sugar-free gum after eating to stimulate saliva production and wash away dietary acids

#### **Smoking**

Around 60% of individuals accessing Neami services identify as a smoker\*

Quitline can offer support

- Smoking is one of the most significant risk factors in the development and progression of gum disease, often resulting in teeth getting loose or being extracted (taken out)
- Smoking is the major cause of mouth and throat cancer (smokers are up to 16 times more likely to develop oral cancer than nonsmokers)
- People who smoke frequently get stained teeth and bad breath (halitosis)

#### Limiting the effects of smoking on oral health

- Stop smoking quitting smoking can significantly improve oral health. (Quit online training is available to Neami staff-http:// www.quit.org.au/resource-centre/training/ online-learning)
- Alternatively, try to cut down the number of cigarettes you smoke
- Consider Nicotine Replacement Therapy (NRT) options
- \* Neami Health Prompt data (2015)

#### Diabetes

People living with severe mental illness are three times more likely to develop type-2 diabetes

Discuss diabetes management with Diabetes Educator

- If diabetes is not well-controlled people may experience more severe gum disease
- Individuals with diabetes are at increased risk of tooth decay as their saliva can contain high levels of glucose and they can get very dry mouths
- Individuals with diabetes are at increased risk of infections (in the mouth and elsewhere in the body) and often have reduced healing capacity

#### Limiting the effects of diabetes on oral health

- Ensure diabetes is well controlled and monitor blood glucose levels
- Ensure optimal oral hygiene practices and follow the oral health messages

#### Medications

Dry mouth is a very common side effect of medications such as anti-depressants and anti-psychotics

Discuss medication effects with GP

- 'Dry mouth' occurs when there is a decrease in salivary flow
- Saliva contains many factors which protect and lubricate the mouth
- Dry mouth is associated with tooth decay (dental caries), gum disease, periodontitis, tooth erosion, difficulty eating or swallowing and mouth discomfort

#### Limiting the effects of dry mouth

- Drink plenty of tap water carry a water bottle
- Drink water by the glass or half-glass constant sipping will wash away remaining
- Limit consumption of caffeine or alcohol they can reduce saliva flow
- Chew mint sugar-free gum to stimulate saliva flow
- Good oral hygiene

#### Oral health- examples of recommended products

Soft toothbrush/ fluoride toothpaste

Inter-dental brushes

Floss or flossettes

#### Dry Mouth

Drink tap water

Dry-mouth alcohol free mouthwash

Dry-mouth gel

#### Sugar-free, mint, chewing gum

Chewing sugar-free MINT chewing gum, stimulates saliva production

#### Sugar substitutes

Artificial sweeteners

## Quarterly Physical Health Promotions

# Projects and Partnerships

# Where to from here....

'We commit to making physical health of people living with a mental illness a national, state and local priority. We will advocate the importance of the physical health of people living with a mental illness across the spectrum of health: prevention, promotion, primary care, community care, hospital care, specialist care, chronic disease management, safety and equality standards and mental health care'
